

DECLARATION OF CONFORMITY

Use of Artificial Intelligence

Doc. LSI-AI-001-EN · version 1.0 · June 2025

1. Subject and scope

This document certifies the manner in which artificial intelligence (AI) tools are used within the services offered by **La Sartoria Informatica** (P.IVA 04234740134), with particular reference to the AI assistant available on the website lasartoriainformatica.it.

2. Human oversight principle

Every AI tool in use operates under the direct and continuous supervision of the consultant. No significant decision — technical, operational or communicative — is delegated autonomously to AI. The professional retains full control at all times over the actions taken and the content produced.

3. Personal data processing

The AI tools employed are certified to:

- not collect or store users' personal data autonomously;
- not transmit information to third parties without explicit consent;
- operate in compliance with Regulation (EU) 2016/679 (GDPR) and the guidelines of the Italian Data Protection Authority (Garante);
- not use user data to train third-party AI models.

4. AI regulatory compliance

The AI systems adopted are classified as **low-risk tools** under the EU Artificial Intelligence Act (AI Act, Reg. EU 2024/1689). Their use is limited to operational support and client communication, always under human supervision.

5. Transparency towards clients

Clients are informed that some content or responses may be supported by AI tools. Every interaction with the virtual assistant is clearly identifiable as such. Clients may at any time request to speak directly with the consultant.

Place and date

Inverigo (CO), June 2025
